

Abstract

A system and method for plant management that generates real time reports and eliminates the heavy reliance on IT personnel to analyze data. A system and method that eliminates the multiple data entry points and the use of multiple databases for the storing of manufacturing process data. A system and method that can easily and quickly be customized to any manufacturing plant and that enables plant personnel to configure customized views of the collected data. A system and method that that can be tailored to focus on certain specifications to ensure that plant personnel are alerted in real time if the manufacturing process is producing products that do not meet those specifications.
